The diesel surcharge for the 2nd quarter of 2025 is calculated on the basis of the average of the published monthly values from November 2024 to January 2025. The values shown include the average diesel value of the trucking zone prices of all hinterland terminals. The level 6 diesel surcharge is applied on this basis. The diesel floater is calculated per loading unit and shown separately on the invoice. The diesel surcharge is adjusted quarterly based on the current diesel price information for bulk consumers, which is published by the Bundesverband Güterkraftverkehr Logistik und Entsorgung (BGL) e.V. at <https://www.bgl-ev.de/>. The diesel surcharge is levied on the basis of the average value of the last three published monthly values and comes into force from an average diesel price of €100.37 per 100 litres. If the average diesel purchase price rises, the diesel surcharge is adjusted on a zone basis for every 4 cents per litre (€4 per 100 litres) exceeded. □
